

Telecom CRM System with Intelligent Automation

Business Requirements Document (BRD)

V 1.0

Prepared By: Hesham Ashrf

Business Analyst

1. Project Overview

The Telecom CRM System with Intelligent Automation is a web-based customer relationship management system designed for telecom companies to efficiently manage customer information, mobile lines, subscriptions, complaints, and customer retention processes.

The system aims to improve operational efficiency, enhance customer satisfaction, reduce complaint resolution time, and automate repetitive business processes using intelligent workflow automation.

The system will support telecom customer service agents, supervisors, administrators, and retention specialists in handling customer interactions, complaint management, package subscriptions, and performance monitoring.

Additionally, the system integrates intelligent automation workflows to improve business operations, including complaint escalation, package renewal reminders, KPI reporting, and customer retention activities.

2. Business Problem

Telecom companies face challenges in managing customer data, complaints, subscriptions, and retention processes due to fragmented systems, manual workflows, and lack of automation. This results in delayed complaint resolution, poor customer experience, and increased customer churn.

3. Business Objectives

The main objectives of this project are:

- Centralize customer data in a single CRM system
 - Improve complaint handling and reduce resolution time
 - Automate repetitive business processes using n8n
 - Enhance customer retention and reduce churn rate
 - Provide real-time reporting and analytics
 - Improve operational efficiency of customer service teams
-

4. Project Scope

In Scope

- Customer Management
- Mobile Line Management
- Subscription & Package Management
- Complaint Management

- Billing Overview
- Notifications System
- Reports & Dashboards
- Workflow Automation (n8n Integration)

Out of Scope

- Mobile customer self-service application
 - Payment gateway integration
 - Network infrastructure management
 - Marketing campaign management system
-

5. Stakeholders

- Admin
 - Customer Service Agent
 - Supervisor
 - Retention Specialist
-

6. Business Requirements

6.1 Customer Management

- The system shall allow users to add, edit, and view customer information.
- The system shall maintain a complete customer history.

6.2 Complaint Management

- The system shall allow creation of complaint tickets.
- The system shall support complaint categorization and prioritization.
- The system shall track complaint status from creation to closure.
- The system shall support complaint escalation.

6.3 Subscription Management

- The system shall allow viewing and managing customer packages.
- The system shall support package renewal, upgrade, and downgrade.
- The system shall track package expiration dates.

6.4 Billing Management

- The system shall display customer billing history.
- The system shall show payment status and outstanding balances.

6.5 Notifications

- The system shall send notifications for package expiry.
- The system shall notify customers about complaint updates.
- The system shall send payment reminders.

6.6 Reporting

- The system shall provide dashboards for KPIs.
- The system shall generate reports on complaints, customers, and revenue.

6.7 Automation (n8n Integration)

- The system shall automatically escalate unresolved complaints after a defined period.
 - The system shall send automated reminders for package expiration.
 - The system shall generate weekly KPI reports automatically.
 - The system shall trigger alerts for high-priority complaints.
-

7. Assumptions

- Users have basic training to use CRM system.
 - Data will be entered or integrated from existing systems.
 - Internet connectivity is available for web-based access.
-

8. Constraints

- System is limited to MVP scope.
 - No mobile application development in this phase.
 - No payment gateway integration in MVP.
-

9. Success Criteria

The project will be considered successful if:

- Complaint resolution time is reduced
- Customer data is centralized
- Automation reduces manual work
- Customer retention improves
- Reports are generated automatically and accurately

10. Mind Map
